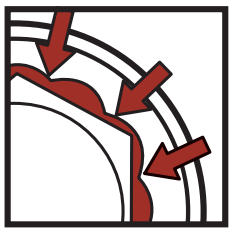
TORQUEPLUS™ Fastening System



All standard and deep hand sockets feature the TORQUEPLUS™ fastening system. This unique system allows greater contact with the flats of fasteners, providing greater torque to enable easier fastening.

Conventional sockets damage fasteners by concentrating forces on the corners. Sidchrome TORQUEPLUS™ sockets spread the force over a larger contact area, reducing rounding off and extending fastener life. Sidchrome TORQUEPLUS™ sockets are particularly useful on worn or rounded fasteners.

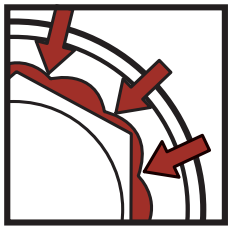
SIDCHROME® LIFETIME GUARANTEE

TORQUEPLUS™

All ring spanners and the ring end of Combination Ring and Open End Spanners (up to 32mm/1-1/4") incorporate the TORQUEPLUS™ fastening system. This unique system allows greater contact with the flats of fasteners, providing greater torque to make tightening easier.

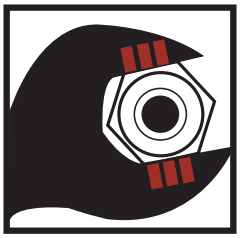
Conventional Spanners damage fasteners by concentrating forces on the corners. Sidchrome TORQUEPLUS™ spanners spread force over a larger contact area, reducing rounding off and extending fastener life. Sidchrome TORQUEPLUS™ spanners are particularly useful on worn or rounded fasteners.



Sidchrome Sockets and Ring Spanners (including Ring End of Combination Spanners) feature the TORQUEPLUS™ fastening system

ANTISLIP DESIGN™

Sidchrome Open End Spanners and the open end of the Combination Ring & Open End Spanners (up to 32mm/1-1/4") feature the innovative **ANTI-SLIP DESIGN™**. **ANTI-SLIP DESIGN™** features a locking groove to prevent slippage and knuckle injury. The unique arc design increases surface contact by over 400%. This means increased torque is applied to the fastener resulting in fewer rounded fasteners meaning the job is faster and safer.



Sidchrome Open End Spanners (and the Open End of Combination Spanners) feature **ANTI-SLIP DESIGN™** (ASD)

Geared Wrench Sets

Reversing lever (Standard & Stubby only) means you don't have to turn the wrench over to change direction. This also allows us to incorporate a 15^0 offset to the ring end for increased leverage and knuckle clearance.

High Torque 72 Tooth mechanism delivers less than 5^0 handle swing, as opposed to 30^0 on conventional spanners - up to 45% stronger ratchet mechanism than comparable products.

TORQUEPLUS FASTENING SYSTEM

Geared wrenches incorporate the Torque Plus fastening system and Anti Slip Design.

Deflecting Beam Torque Wrenches - Dual-signal

These World famous Dual-Signal torque wrenches employ the principle of applying torque to a deflecting beam rather than a coil spring. This helps to prolong wrench life, with a greater safety margin on maximum loading and provides more consistent and accurate readings throughout the range of each wrench.
The operator can see and hear when a Dual-Signal Torque Wrench reaches the selected torque. When working in a noisy situation, the signal can be seen; alternatively, if the operator cannot see the signal, he or she can hear it. In addition, the operator can usually feel when the signal mechanism releases. The signal mechanism is located in the fixed arm of the wrench and the handle is fitted to the deflecting member, manufactured from specially treated high grade steel. The scale graduations are widely spaced and allow the operator to accurately pre-select the torque required.

FEATURES:

- Dual Signal (see and hear when the wrench has reached the selected torque)
- Rigidity
- Accuracy
- Repeatability
- Durability
- Meets or exceeds Australian Standard AS4115-1993 and has an accuracy of +/- 2% of setting
- Unique cushion grip handle
- All wrenches supplied in sturdy blow-moulded case
- All wrenches supplied with a traceable inspection ticket
- Made in Australia

THE DUAL SIGNAL PROCEDURE
The deflection bar (A) is bent by the torque being applied, this carries the adjustable wedge (B) towards the stationary arm (C) in which the trip (D) is located. When the trip is depressed (1) the indicator pin (E) is released (2). This signal can be seen and heard by the operator.

Micrometer Torque Wrenches

The accuracy of Sidchrome Micrometer Torque Wrenches exceeds all International standards, with a traceable calibration certificate supplied with each wrench to satisfy ISO9000 quality systems.

The Sidchrome Micrometer Torque Wrenches are accurate to within ± 3% of reading and are graduated in both Nm and ft/lb (26912 - in/lb) for foolproof and accurate setting.

Finally, Sidchrome Micrometer Torque Wrenches are supplied in blow moulded boxes to protect this most valuable investment.

26912 3/8" Drive, 1-20Nm (10-180 in/lb)

- Length - 215mm
- High Quality 72 tooth ratchet allows use in confined spaces.

26913 3/8" Drive, 8-60Nm (5-45 ft/lb)

- Length 307mm
- High quality, reversible ratchets allow work in confined areas.
- Handle materials and lens resist all chemicals in common automotive, industrial and aviation use.

26915 1/2" Drive, 40-200Nm (30-150 ft/lb)

- Length - 442mm
- High quality, reversible ratchets allow work in confined areas.
- Handle materials and lens resist all chemicals in common automotive, industrial and aviation use.

26914 3/4" Drive, 80-400Nm (60-300 ft/lb)

- Length - 682mm
- New 3/4" drive, 60 position ratchet. The ratchet features 4 pawls in offset pairs so that 2 are always in engagement. In this way, 60 positions can be achieved from 30 teeth giving the ideal combination of coarse tooth pattern for strength, but with a narrow engagement angle to allow use of the wrench in confined spaces.
- Handle materials and lens resist all chemicals in common automotive, industrial and aviation use.
- The wrench body tube has been extensively strengthened and proven through cycle testing to withstand prolonged use at maximum Torque value.
